## IN THE CLAIMS

## Amendments to the Claims:

This listing of claims will replace all prior versions, and listings, of claims in the application:

## **Listing of Claims**:

- 1. (Currently Amended) A heater resistance (2) in particular-for heating a solid part (20), the resistance comprising: an electric wire (10); and a ceramic sheath (16) surrounding the wire; the resistance being characterized in that wherein the sheath comprises includes a woven layer.
- 2. (Currently Amended) A heater resistance according to <u>claim 1</u>, the preceding claim, characterized in that <u>wherein</u> the woven layer (16) comprises threads of alumina (AL<sub>2</sub>O<sub>3</sub>).
- 3. (Currently Amended) A heater resistance according to claim 1, any preceding-claim, characterized in that wherein the woven layer (16) comprises threads of silica (SiO<sub>2</sub>).
- 4. (Currently Amended) A heater resistance according to claim 1, any preceding claim, characterized in that wherein the woven layer (16) comprises threads of borate (B<sub>2</sub>O<sub>3</sub>).
- 5. (Currently Amended) A heater resistance according to <u>claim 1</u>, <u>any preceding claim</u>, <u>characterized in that it further comprises further comprising a mass (14) of electrically insulating material, <del>preferably interposed between the wire (10) and the sheath (16).</del></u>

- 6. (Currently Amended) A heater resistance according to claim 5, the preceding claim, characterized in that wherein the insulating mass (14) is includes constituted by a mineral, e.g. magnesia (MgO).
- 7. (Currently Amended) A heater resistance according to claim 1, any preceding claim, characterized in that it presents including a portion (6) of generally elongate shape.
- 8. (Currently Amended) A heater resistance according to claim 1, any preceding claim, characterized in that it includes further comprising a connector (4) and presents a heater segment (6) and a connection segment (8) adjacent to the connector, the wire (10) having a cross-section in the connection section of area that is greater than the area of the cross-section of the wire in the heater segment.
- 9. (Currently Amended) A heater resistance according to claim 1, any preceding claim, characterized in that it includes further comprising a connector (4) and a portion (8) adjacent to the connector that is tapering in shape.
- 10. (Currently Amended) A member (20), in particular a probe mounted on board a vehicle for measuring an air flow parameter, such as including temperature, the <u>probe member</u> comprising a body (22) and being characterized in that it includes at least one heater resistance (2) according to <u>claim 1 any preceding claim</u>, the heater resistance being secured to the body.

- 11. (Currently Amended) A <u>probe member</u>-according to <u>claim 10</u>, the preceding claim, characterized in that wherein the heater resistance (2) is of a shape that is not plane.
- 12. (Currently Amended) A <u>probe member-according to claim 10, or claim 11, eharacterized in that wherein the heater resistance (2) extends at the outside of the body (22).</u>
- 13. (Currently Amended) A method of fabricating a member (20), in particular a probe for mounting on board a vehicle for measuring an air flow parameter such as including temperature, the method being characterized in that comprising deforming a heater a resistance (2) according to any one of claims 1 to 9 is deformed claim 1 in order to enable it the heater resistance to be secured to a body (22) of the probemember.
- 14. (New) A heater resistance according to Claim 6, wherein the mineral includes magnesia (MgO).
